Replacement and handling of soldering iron head

The tip can be removed by loosening the sleeve.

The temperature control station must be turned off and let the tip cool down before you can remove the tip, remove the fixed place in the sleeve of the formation of oxide dust. Care must be taken to prevent this dust from entering the eyes. Replace the tip and lock the sleeve with the strength of the normal hand.

Precautions

Do not use the machine near the flammable gas, paper or other flammable objects. Do not touch the heat pipe, the metal part near the tip or the hot air straight part. Notify the workshop stakeholders, limelight, iron tip is extremely hot may lead to dangerous accidents, rest or after the completion of the power should be turned off. Do not wet the machine, or use it when wet hands. Due to the hot head handle with a heat-resistant material mica tube, after a short period of time will take white smoke, is a normal phenomenon, the heating tube contains quartz glass, if the fall or heavy earthquake will make it broken. Replace the heating material, the model must be the same. If you do not use the machine for a long time, you should unplug the power plug. Do not remove the machine without authorization.
