

Features

- 1.Be sure to spread tin on the new solder tip before use. It can keep the tip away from oxidation and rust which will make tin not stick to the tip.
- 2.When common welding, adjust the temperature between 250-350°C. While special welding ,the temperature will be higher, so please note that immediately adjust the temperature back to 250-350°C after welding .Otherwise,it is easy to damage solder station and tip.
- 3.Please clean the solder tip with the wet sponge after working.Then spread tin on the solder tip to keep it from becoming black ,and extend its service life.
- 4.BEST solder tip is the first gold-plated solder tip in China. After national testing, it has been proved that the inoxidizability of its surface is aboue 5 times of the traditional ones',and its service life is above 10 times of others' in China

Specification

Description

Name:	Welding head	Model:	900M-T-1.2D
Brands:	BEST	Specification:	1.2D
Size:	41mm	Weight:	73.5g
Material:	Copper, iron, nickel and chromium		
Feature1:	Oxygen-free copper material imported raw materials, thermal fast		
Feature2:	Up and down the tin and smooth, stable performance after welding joints smooth, uniform		
Feature3:	Take the tin and smooth, life over 70,000 solder joints		
Feature4:	Overall use of special machinery and production process, the precise size		
Feature5:	Electroplating using advanced nanotechnology, with superior corrosion, oxidation resistance
